1

我使用的是 sqlite 3.30.0 2019-10-04，经测试可以嵌套 15 层 select，不能嵌套 16 层 select，即最大嵌套层数为 15。

```
sqlite> select * from (select * from (select * from (select * from (select * from (select * from (select * from (se
lect * from (select * from (select * from (select * from (select * from (select * from (select * from (select * fro
m (t)))))))))))))));
1
sqlite> select * from (select * from (select * from (select * from (select * from (select * from (select * from (se
lect * from (select * from (select * from (select * from (select * from (select * from (select * from (select * fro
m (select * from (t))))))))))))))));
Error: parser stack overflow
```

2

```sql
select count(*) from (select count(*) from [table name] group by [all column]);
-- or
select count(*) from (select distinct * from [table name]);
```
